

packages/graph-view/src/themes/novadiffEmbed.ts

Kind: added · Baseline: 46a8da0664d1 · Target: NovaDiff · Generated: 2026-05-19T22:52:40.303Z

Overview

A new file `packages/graph-view/src/themes/novadiffEmbed.ts` has been added. It defines a locked theme for NovaDiff documentation embeds.

Key changes

- **Import:** `import type { ThemeConfig } from "../types.ts";` (line 1).
- **Export:** `export const NOVADIFF_EMBED_THEME: ThemeConfig = {` (line 4).
- **Properties:**
 - `presetId: "dark-ocean"` (line 5)
 - `accentId: "purple"` (line 6)
 - `headingFont: "sans"` (line 7)
- **Comment:** "Locked theme for NovaDiff documentation embed (matches host App.css tokens)." (line 3).

Impact

- Provides a pre-configured `ThemeConfig` that can be imported by embed components.
- No new runtime logic is introduced; the file only declares a constant.

Risks & follow-ups

- Verify that `../types.ts` resolves correctly in all build environments.
- Ensure `NOVADIFF_EMBED_THEME` is referenced where intended (e.g., in embed components).
- Run linting and TypeScript checks to confirm type correctness.
- Consider adding a unit test to assert the theme's properties match the expected token values.
