

## src/App.css

Kind: modified · Baseline: 46a8da0664d1 · Target: NovaDiff · Generated: 2026-05-19T22:03:48.932Z

### Overview

The `src/App.css` file now includes three new CSS rules (lines R2638-R2644) that target the NovaDiff graph-embed component inside the dashboard pane.

### Key changes

- `R2638-R2640` : ``css .novadiff-graph-embed .embed-graph-dashboard-pane { overflow: hidden; }

– `R2642-R2644` : `css .novadiff-graph-embed .embed-graph-dashboard-pane > .novadiff-graph-embed { flex: 1 1 auto; min-height: 0; }` `` These additions are confined to the last ~9 lines of `src/App.css` .

### Impact

- The `overflow: hidden` rule clips any content that would otherwise overflow the dashboard pane, which should prevent unintended scrollbars.
- The `flex: 1 1 auto; min-height: 0;` rules allow the embedded graph to grow and shrink within the pane, improving responsiveness.

### Risks & follow-ups

- Verify that `overflow: hidden` does not unintentionally hide required content in other contexts.
- Run the nearest targeted tests and perform a quick manual smoke test on the graph-embed area.
- Monitor for unintended interactions with other flex containers that might share the same class names.
