

src/app/workspaceStorage.ts

Kind: modified · Baseline: 46a8da0664d1 · Target: NovaDiff · Generated: 2026-05-19T22:41:18.054Z

Overview

`src/app/workspaceStorage.ts` now adds two boolean options to `resolveOnboardingGate` : `launchAuthConfirmed` and `launchWorkspaceConfirmed` (added at lines 71-74). The function signature still lists `hasUser` and `hasActiveWorkspace` , but the logic no longer references them. The gating now depends only on `skipBoot` , `localOnlyMode` , and the new flags.

Key changes

- **New option fields** (`launchAuthConfirmed` , `launchWorkspaceConfirmed`) added with comments at R71-R74.
- **Local-only mode logic** updated at R81-R82: if `!opts.launchWorkspaceConfirmed` return `"welcome"` .
- **Legacy gating removed**: blocks that returned `"welcome"` or `"hub"` based on `hasUser` / `hasActiveWorkspace` (originally lines 79-91) are deleted.
- **Return path**: after the local-only check, the function always returns `"app"` if no earlier return occurs.
- **Signature unchanged**: `hasUser` and `hasActiveWorkspace` remain in the parameter list but are unused.

Impact

- The function now yields only `"boot"` , `"welcome"` (in local-only mode), or `"app"` . The `"hub"` gate is no longer reachable.
- Callers that previously relied on `hasUser` or `hasActiveWorkspace` must now provide `launchAuthConfirmed` and `launchWorkspaceConfirmed` to control the flow.
- Existing telemetry or logs that referenced the removed gates should be reviewed.
- The change is O(1) and has negligible runtime impact.

Risks & follow-ups

- **Regression in onboarding**: tests or UI paths expecting a `"hub"` gate may fail; run end-to-end tests to confirm the new flow.
- **Flag misuse**: if `launchAuthConfirmed` or `launchWorkspaceConfirmed` are not set correctly, users may skip the welcome screen unintentionally.
- **Legacy references**: search the codebase for `hasUser` and `hasActiveWorkspace` to ensure no remaining dependencies.
- **Documentation**: update any docs that mention the old gating logic.
