

src/app/workspaceTypes.ts

Kind: modified · Baseline: 46a8da0664d1 · Target: NovaDiff · Generated: 2026-05-19T22:41:46.097Z

Overview

`src/app/workspaceTypes.ts` now exports a new `WorkspaceUiState` interface and adds an optional `uiState` property to `NovaWorkspace`. The comment at R33 notes that this UI state is restored and not shown verbatim in the main app.

Key changes

- **Exported `WorkspaceUiState` (R37-R41)** – defines
 - `workspacePage?: "compare" | "history" | "docs" | "prs" | "publish"`
 - `leftRoot?: string`
 - `rightRoot?: string`
 - `compared?: boolean`
- **Extended `NovaWorkspace` (R34)** – `uiState?: WorkspaceUiState | null;`
- **Documentation comment (R33)** – indicates restoration of UI state.

Impact

- **Serialization** – any code that writes or reads `NovaWorkspace` must accommodate the optional `uiState` field.
- **Type safety** – consumers can now type-check UI state via the exported interface.
- **Backward compatibility** – the field is optional, so existing workspace data remains valid.
- **UI logic** – components can read `workspacePage` and root paths directly from the workspace model.

Risks & follow-ups

- **Data migration** – ensure older workspace JSON files deserialize correctly when `uiState` is absent.
- **Test coverage** – update unit tests that construct `NovaWorkspace` objects to include or ignore `uiState`.
- **Documentation** – expose the new `WorkspaceUiState` interface in API docs.
- **Linting & build** – run `tsc`, lint, and build to confirm no type errors introduced by the new export.
