

src/components/HistoryCompareStrip.tsx

Kind: modified · Baseline: 46a8da0664d1 · Target: NovaDiff · Generated: 2026-05-19T22:44:05.894Z

Overview

`HistoryCompareStrip` now displays the live repository path in a read-only field and uses `pathDisplayLabel` to format that path. The component no longer accepts user edits to the live repo root.

Key changes

- **Import added:** `import { pathDisplayLabel } from "../app/pathDisplay";` (line 9).
- **Prop renamed:** `onLiveRepoRoot` → `_onLiveRepoRoot` in the signature (lines 53-54); the prop is no longer referenced.
- **Input updated:**
 - `value={pathDisplayLabel(liveRepoRoot)}` (lines 140-141).
 - `readOnly` attribute added (line 141).
 - `onChange` handler removed (lines 139-140).
 - Placeholder changed to `"Browse for live clone..."` (lines 142-143).
 - `title` attribute removed (line 144).

Impact

- **UI:** The live-repo path is now immutable; users must click the browse button to change it.
- **API:** The component still declares an `_onLiveRepoRoot` prop but does not use it, which may confuse callers.
- **Formatting:** `pathDisplayLabel` ensures a consistent, user-friendly display of the repo path.
- **Tests:** Any tests expecting the live-repo input to be editable will need updating.
- **Lint:** The unused `_onLiveRepoRoot` may trigger a warning; consider removing it if no longer needed.

Risks & follow-ups

- **Regression:** Callers that rely on `onLiveRepoRoot` being invoked will silently fail. Verify that such callbacks are no longer required.
- **Unused prop:** Decide whether to keep `_onLiveRepoRoot` for backward compatibility or remove it to avoid lint noise.
- **Localization:** The placeholder text change may need to be reflected in i18n resources.
- **Testing:** Update unit tests for `HistoryCompareStrip` to assert the read-only behavior and new placeholder.
