

src/vite-env.d.ts

Kind: modified · Baseline: 46a8da0664d1 · Target: NovaDiff · Generated: 2026-05-19T22:39:53.766Z

Overview

`src/vite-env.d.ts` now declares two additional Electron API methods:

- `workspaceRefreshHistory` (added lines 321-324)
- `workspaceUpdateUiState` (added lines 329-332)

These augment the existing `ElectronAPI` interface without removing any prior members.

Key changes

- `workspaceRefreshHistory(payload: {workspaceId: string; fetchRemote?: boolean}) → Promise<NovaWorkspace>`
- `workspaceUpdateUiState(payload: {workspaceId: string; uiState: WorkspaceUiState}) → Promise<WorkspaceSessionState>`

Both signatures are new; the rest of the interface remains unchanged (see diff lines R321-324 and R329-332).

Impact

- **Renderer side:** components can now invoke `window.electronAPI.workspaceRefreshHistory` or `workspaceUpdateUiState` to trigger a history refresh or update UI state.
- **Type safety:** TypeScript consumers receive compile-time checks for the new payload shapes.
- **No breaking changes:** existing API contracts are preserved; the additions are purely additive.

Risks & follow-ups

- **Main-process implementation:** the main process must expose matching handlers; otherwise calls will fail at runtime (unknown from the available diff/scan evidence).
- **Testing:** add unit/integration tests covering the new API paths.
- **Documentation:** update API docs to list the new methods and their payloads.
