

src/app/llmStorage.ts · interface LlmSummarizePayload

Kind: modified · Baseline: NovaDiff-main · Target: NovaDiff · Requested mode: expanded · Effective mode: expanded · Symbol: interface LlmSummarizePayload · Generated: 2026-05-14T07:46:55.086Z

Overview

The selected region of the file diff represents a modification to the `LlmSummarizePayload` interface in the `src/app/llmStorage.ts` file. The interface is used to store settings for the NovaDiff tool, which generates summaries of code changes. This modification introduces a new field called `summaryChunkTotal`, which will be used to track the total number of summary chunks generated by the tool.

Selected change

The selected change is the addition of a new field called `summaryChunkTotal` to the `LlmSummarizePayload` interface. This field will be used to keep track of the total number of summary chunks generated by the tool, which can help users understand the scope of their changes and the potential impact on the codebase.

Semantic context

The semantic context of this change is related to the NovaDiff tool's ability to generate summaries of code changes. The `LlmSummarizePayload` interface is used to store settings for the tool, and the addition of the `summaryChunkTotal` field allows users to track the total number of summary chunks generated by the tool.

Risks & follow-ups

There are no immediate risks associated with this change. However, it may require additional testing and documentation to ensure that the tool continues to function correctly with the new field added.

Additionally, users may need to update their settings to take advantage of the new field. In terms of follow-ups, it would be beneficial to provide more detailed documentation on how to use the `summaryChunkTotal` field effectively in the NovaDiff tool.

This could include examples of how to use the field to track the scope of changes and the potential impact on the codebase.
