

src/app/mermaidBoot.ts · function currentMermaidTheme

Kind: added · Baseline: NovaDiff-main · Target: NovaDiff · Requested mode: expanded · Effective mode: expanded · Symbol: function currentMermaidTheme · Generated: 2026-05-14T07:16:59.397Z

Overview

The selected region in the NovaDiff-main vs NovaDiff diff for the `src/app/mermaidBoot.ts` file includes a new function named `currentMermaidTheme`. This function is used to determine the current Mermaid theme based on the user's preferences. The function returns either "dark" or "default", depending on whether the user has specified a preference for dark mode.

Selected change

The selected change in this region is the addition of the `currentMermaidTheme` function, which is a new function that determines the current Mermaid theme based on the user's preferences. The function takes no arguments and returns a string indicating the current theme.

Semantic context

The `currentMermaidTheme` function is enclosed within an `if` statement that checks if the user has specified a preference for dark mode. If the user has not specified a preference, the function returns "default". Otherwise, it returns "dark". This semantic context helps to understand the purpose of the function and how it contributes to the overall behavior of the application. It also highlights the potential impact of the change on the application's functionality.

Risks & follow-ups

The addition of the `currentMermaidTheme` function introduces a new point of failure and potential for errors. Ensuring that the function works correctly and handles all possible edge cases is essential.

Additionally, the function may have unforeseen consequences in other parts of the codebase, so it is important to thoroughly review and test the changes. In summary, the selected region includes a new function that determines the current Mermaid theme based on the user's preferences.

The function is enclosed within an `if` statement that checks if the user has specified a preference for dark mode. The addition of this function introduces a new point of failure and potential for errors, so thorough testing and review are necessary to ensure its correctness and safety.
