

src/components/LlmSummaryMarkdown.tsx · function LlmSummaryMarkdownInner

Kind: modified · Baseline: NovaDiff-main · Target: NovaDiff · Requested mode: expanded · Effective mode: expanded · Symbol: function LlmSummaryMarkdownInner · Generated: 2026-05-14T07:20:02.999Z

Overview

This section provides a brief overview of the selected change region in the NovaDiff repository. The change is a modification to the `src/components/LlmSummaryMarkdown.tsx` file, specifically to the `LlmSummaryMarkdownInner` function. The change was made in the `NovaDiff` branch and is part of a larger PR that addresses a bug in the code.

Selected change

The selected change region includes four lines of code, from line 30 to line 75. These lines are part of the `LlmSummaryMarkdownInner` function, which is used to render a summary of a Markdown document. The change introduced by this PR involves adding a new component called `MermaidBlock`, which is used to display Mermaid diagrams within the summary. This change also involves updating the `code` component to include support for Mermaid diagrams.

Semantic context

The change in this PR is part of a larger effort to improve the rendering of Mermaid diagrams within NovaDiff. The `MermaidBlock` component is a new addition to the NovaDiff codebase, and it provides a way to display Mermaid diagrams within the summary. The change also involves updating the `code` component to include support for Mermaid diagrams. This allows users to view Mermaid diagrams within the NovaDiff summary, making it easier to understand complex data structures.

Risks & follow-ups

There are no immediate risks associated with this change. However, there may be potential issues if the `MermaidBlock` component is not properly tested or if the changes to the `code` component introduce bugs. In the future, it would be beneficial to conduct additional testing to ensure that the changes do not introduce any unexpected behavior. Additionally, it may be useful to provide more documentation on how to use the `MermaidBlock` component within NovaDiff.
