

src/components/LlmSummaryMarkdown.tsx · function MermaidBlock

Kind: modified · Baseline: NovaDiff-main · Target: NovaDiff · Requested mode: expanded · Effective mode: expanded · Symbol: function MermaidBlock · Generated: 2026-05-14T07:18:54.798Z

Overview

The selected region of the file diff represents a modification to the `MermaidBlock` function in the `src/components/LlmSummaryMarkdown.tsx` file. The function is used to render Mermaid diagrams within the LLM summary markdown component.

The modification involves adding a new line of code that calls the `runMermaidNodes` function with an array containing a single element, which is a `pre` element with the class name "mermaid" and the text content set to the chart string passed as a prop. This change is likely intended to add support for rendering Mermaid diagrams within the LLM summary markdown component.

Selected change

The selected change is a modification to the `MermaidBlock` function, specifically the addition of a new line of code that calls the `runMermaidNodes` function with an array containing a single element, which is a `pre` element with the class name "mermaid" and the text content set to the chart string passed as a prop. This change is likely intended to add support for rendering Mermaid diagrams within the LLM summary markdown component.

Semantic context

The `MermaidBlock` function is used to render Mermaid diagrams within the LLM summary markdown component. The addition of this new line of code is likely intended to add support for rendering Mermaid diagrams within the LLM summary markdown component. The `runMermaidNodes` function is called with an array containing a single element, which is a `pre` element with the class name "mermaid" and the text content set to the chart string passed as a prop. This will allow the Mermaid diagram to be rendered within the LLM summary markdown component.

Risks & follow-ups

There are no immediate risks or follow-ups associated with this change. However, it is important to note that the addition of this new line of code may introduce additional complexity or dependencies within the codebase, which could potentially impact the overall stability or maintainability of the system.

It is recommended to thoroughly review the changes made to the `MermaidBlock` function and ensure that they do not introduce any unintended side effects or compatibility issues. Additionally, it may be helpful to perform some level of testing to ensure that the new functionality works as expected and does not cause any issues with the existing codebase.
