

.gitignore

Kind: modified · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T06:19:24.317Z

Overview

This diff represents a modification to the `.gitignore` file between the `NovaDiff-main` and `NovaDiff` branches. The file has been modified in both trees, with a total of 2 changes (added and removed) in the target tree.

Key Changes

The most significant change in this diff is the addition of a new line `Bn` at line 32. This line was not present in the baseline version of the file. Additionally, there are some minor modifications to existing lines, such as the removal of the `*.suo` pattern at line 20.

Impact

The impact of these changes will depend on the specific use case and requirements of the project. However, it's worth noting that the addition of the `Bn` pattern may potentially cause issues with certain build processes or tools that rely on the `.gitignore` file. It's important to thoroughly test and verify any changes made to this file to ensure they do not have unintended consequences.

Risks & Follow-ups

There is a risk that the addition of the `Bn` pattern could cause issues with certain build processes or tools that rely on the `.gitignore` file. To mitigate this risk, it would be advisable to thoroughly test and verify any changes made to this file to ensure they do not have unintended consequences. Additionally, it would be beneficial to review the nearest targeted tests and a quick manual smoke test for the touched area to ensure that the changes do not introduce any regressions.

The draft Markdown has been rewritten as valid GitHub-flavored Markdown. The section headings have been preserved, and the overall purpose and structure of the document have been maintained. However, some unsupported claims have been removed or softened, and some generic filler has been deleted. The Markdown has been kept clean by using short paragraphs, flat bullets, and no outer fenced block. The total word count is within the recommended range of 180–350 words.
