

electron/main.cjs

Kind: modified · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T06:36:18.376Z

Overview

This diff represents a change to the `electron/main.cjs` file in the NovaDiff repository. The file is part of the Electron application's main process, which handles various aspects of the user interface and interoperability with other systems. This change involves adding several new imports and exports, as well as modifying existing ones, to support the generation of documentation bundles for the NovaDiff application.

Key changes

The following are some of the key changes made to the file:

- New imports:
 - `const fs = require("node:fs/promises");`
 - `const { pathToFileURL } = require("node:url");`
 - `const { writeNovadiffDocsBundle } = require("./novadiff-docs-writer.cjs");`
 - `const { generateNovadiffDocsPdf } = require("./novadiff-docs-pdf.cjs");`
 - `const { writeNovadiffDocsHtml } = require("./novadiff-docs-html.cjs");`
- Changed imports:
 - `const { runCompareEngine } = require("./compare-runner.cjs");`
 - `const { summarizeChange, summarizeChangeStream, probeProvider } = require("./llm.cjs");`
- New exports:
 - `const { writeNovadiffDocsBundle } = require("./novadiff-docs-writer.cjs");`
 - `const { generateNovadiffDocsPdf } = require("./novadiff-docs-pdf.cjs");`
 - `const { writeNovadiffDocsHtml } = require("./novadiff-docs-html.cjs");`
- Modified lines:
 - `const fs = require("node:fs/promises");`
 - `const { pathToFileURL } = require("node:url");`
 - `const { runCompareEngine } = require("./compare-runner.cjs");`
 - `const { summarizeChange, summarizeChangeStream, probeProvider } = require("./llm.cjs");`

Impact

The changes made to the file are likely to have a positive impact on the NovaDiff application's ability to generate documentation bundles for its users. The new imports and exports added support for generating PDF and HTML documentation bundles, which can be useful for users who prefer these formats over markdown or other formats. Additionally, the modified lines that call the

`runCompareEngine` function and use the `summarizeChange` and `summarizeChangeStream` functions from the `llm.cjs` module are likely to improve the correctness and maintainability of the code.

Risks & follow-ups

There is a risk that the changes made to the file may introduce bugs or compatibility issues with other systems. However, the evidence provided in the note suggests that the changes are likely to be safe and will not cause any significant problems. To verify this, it would be necessary to run the JS/TS lint, test, and production build commands used by this repo.
