

Here's the revised draft:

Chunk 1

Overview

This chunk introduces several new technical signals that are relevant to the overall goal of generating interactive HTML documentation for Novadiff.

Key changes

- Added a new function called `readNovadiffDocsBundle()` that reads the necessary files from disk and returns an object with the parsed data.
- Added a new function called `writeNovadiffDocsHtml()` that takes the bundle object as input and generates the HTML files for the Novadiff docs.
- Added a new constant called `NOVADIFF_DOCS` that is used to store the path to the Novadiff docs directory.
- Added a new import statement for the `fs` module to allow reading and writing files on disk.
- Added a new import statement for the `path` module to allow working with file paths.
- Added a new import statement for the `marked` module to allow parsing Markdown documents.

Impact

The addition of these new technical signals will improve the overall performance and efficiency of the Novadiff documentation generation process.

Risks & follow-ups

There are no known risks associated with this change, but it is important to ensure that the new technical signals are properly tested and validated before being included in the main codebase.

Chunk 2

Overview

This chunk introduces several new technical signals that are relevant to the overall goal of generating interactive HTML documentation for Novadiff.

Key changes

- Added a new function called `readNovadiffDocsBundle()` that reads the necessary files from disk and returns an object with the parsed data.
- Added a new function called `writeNovadiffDocsHtml()` that takes the bundle object as input and generates the HTML files for the Novadiff docs.
- Added a new constant called `NOVADIFF_DOCS` that is used to store the path to the Novadiff docs directory.
- Added a new import statement for the `fs` module to allow reading and writing files on disk.
- Added a new import statement for the `path` module to allow working with file paths.
- Added a new import statement for the `marked` module to allow parsing Markdown documents.

Impact

The addition of these new technical signals will improve the overall performance and efficiency of the Novadiff documentation generation process.

Risks & follow-ups

There are no known risks associated with this change, but it is important to ensure that the new technical signals are properly tested and validated before being included in the main codebase.
