

electron/novadiff-docs-pdf.cjs

Kind: added · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T06:38:52.583Z

Overview

This is a diff between two trees on disk, with a focus on the file `electron/novadiff-docs-pdf.cjs`. The change kind is "added" (new file only in target).

Key changes

The following changes were made to this file:

- Added several functions related to generating PDF documents from HTML, including `htmlToPdfFile`, `buildMainPdfHtml`, and `buildDiagramsPdfHtml`.
- Changed import-like lines, adding `const fs = require("node:fs/promises");`, `const os = require("node:os");`, `const path = require("node:path");`, `const { pathToFileURL } = require("node:url");`, and `const { BrowserWindow } = require("electron");`.
- Changed line ranges, adding R3-401.
- Cited changed lines, adding R1-401.

These changes are likely to improve the functionality of generating PDF documents from HTML for NovaDiff. The addition of new functions and changed import-like lines should make it easier to generate PDFs with more features and customization options. Additionally, the changed line ranges and cited changed lines indicate that the code has been updated to support new functionality or fix bugs.

Impact

The impact of these changes is likely to improve the functionality of generating PDF documents from HTML for NovaDiff. The addition of new functions and changed import-like lines should make it easier to generate PDFs with more features and customization options. Additionally, the changed line ranges and cited changed lines indicate that the code has been updated to support new functionality or fix bugs.

Risks & follow-ups

There may be regression risks if the changes are not thoroughly tested. It would be beneficial to verify that the new functions work as expected and that the changed import-like lines do not introduce any unexpected side effects. Additionally, it would be helpful to ensure that the changed line ranges and cited changed lines are accurate and up-to-date.
