

Overview

This diff represents a change to the NovaDiff documentation generation tool. The changes are primarily related to the way the tool generates documentation for the codebase comparison bundle. The new version includes additional diagrams and a more detailed narrative.

Key changes

The following changes were made to the NovaDiff documentation generation tool:

- New Mermaid diagrams for the change mix, depth distribution, module imports, cross-file calls, and types classes.
- Updated README.md with a more detailed narrative and added sections for the generated PDFs.
- Changed the way the tool generates summaries for each file in the codebase.
- Added a new function to generate a release overview Markdown file.

Impact

The changes to the NovaDiff documentation generation tool have improved the quality of the generated documentation for the codebase comparison bundle. The new Mermaid diagrams provide additional insights into the change mix, depth distribution, and module imports, while the updated README.md provides a more detailed narrative and additional sections for the generated PDFs. The changes to the summary generation also improve the correctness and maintainability of the tool.

Risks & follow-ups

There is a risk that the new version may not be compatible with older versions of the tool. However, this risk can be mitigated by testing the new version thoroughly. Additionally, it is important to verify that the new Mermaid diagrams are accurate and provide useful insights into the change mix, depth distribution, and module imports. Finally, it is important to ensure that the updated README.md is accurate and provides a clear narrative for the generated PDFs.
