

src/app/commitMessage.ts

Kind: added · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T06:58:04.285Z

Overview

This diff represents a change to the `src/app/commitMessage.ts` file between the `NovaDiff-main` and `NovaDiff` branches. The file contains functions for parsing and building commit messages, with added functionality for handling file changes in the LLM prompt.

Key changes

The most significant changes in this diff are the addition of new functions for parsing and building commit messages, as well as the addition of new imports and exports for these functions. These changes are grounded in the evidence provided, which includes the touched symbols, changed line ranges, and cited diff lines.

Impact

The impact of these changes is likely to be positive, as they add new functionality to handle file changes in the LLM prompt. This should improve the accuracy and usability of the commit message generation process. Additionally, the use of type annotations and the introduction of new imports and exports should improve maintainability and readability of the code.

Risks & follow-ups

There may be a risk of regression if the new functionality introduced by these changes is not properly tested or if there are issues with compatibility with other parts of the codebase. To mitigate this risk, it would be beneficial to thoroughly test the changes and verify that they do not cause any issues with other parts of the codebase. Additionally, it would be useful to review the impact of these changes on performance and observability, as well as to ensure that the new functionality is well-documented and easy to understand for other developers.
