

src/app/diffExcerpt.ts

Kind: modified · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T06:58:27.317Z

Overview

This diff represents a modification to the `src/app/diffExcerpt.ts` file between the `NovaDiff-main` and `NovaDiff` branches. The change involves modifying the `buildDiffExcerptChunks` function to improve the performance of the diff excerpts generation process.

Key changes

The following are the most important implementation changes made in this diff:

- Added a new constant `FILE_SUMMARY_MAX_CHUNKS` to control the maximum number of chunks generated by the `buildDiffExcerptChunks` function.
- Modified the `buildDiffExcerptChunks` function to use the `FILE_SUMMARY_MAX_CHUNKS` constant to determine the maximum number of chunks to generate.
- Added a new exported function `buildDiffExcerpt` that generates a single excerpt for the entire diff, rather than multiple chunks.

Impact

This change is expected to improve the performance of the diff excerpts generation process by reducing the number of chunks generated and improving the efficiency of the `buildDiffExcerptChunks` function.

Risks & follow-ups

There is a risk that the change may introduce bugs or compatibility issues with other parts of the codebase. To verify the impact of this change, we should run the relevant tests and perform a thorough review of the affected code. Additionally, we should ensure that the new `buildDiffExcerpt` function works as intended and provides accurate results for all input scenarios.
