

src/app/docWorkspaceMetrics.ts

Kind: added · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T06:59:04.981Z

Overview

This folder diff between two trees on disk represents a significant update to the NovaDiff app's core functionality. The changes primarily affect the `src/app/docWorkspaceMetrics.ts` file, which now includes new functions for generating metrics and building the compare metrics markdown. Additionally, the `buildDocWorkspaceMetrics` function has been updated to include more detailed information about the changed files, such as their extension counts and depth histogram.

Key changes

The following are some of the key changes in this diff:

- New functions for generating metrics and building the compare metrics markdown have been added to the `src/app/docWorkspaceMetrics.ts` file.
- The `buildDocWorkspaceMetrics` function has been updated to include more detailed information about the changed files, such as their extension counts and depth histogram.
- New interfaces and exported functions have been added to the `src/app/docWorkspaceMetrics.ts` file, including `ExtensionCount`, `DocWorkspaceMetrics`, `changeKindPieMermaid`, and `depthBarMermaid`.

Impact

This update should have a positive impact on the NovaDiff app's functionality, as it allows users to generate more detailed metrics and build more informative compare metrics markdown. Additionally, the new functions and interfaces added to the `src/app/docWorkspaceMetrics.ts` file will help maintain the codebase and ensure that it continues to function correctly over time.

Risks & follow-ups

There are no known risks associated with this update, but it is important to verify that the changes do not introduce any bugs or compatibility issues. Additionally, it may be helpful to review the updated documentation for the `src/app/docWorkspaceMetrics.ts` file to ensure that it is accurate and up-to-date.
