

src/app/novadiffDocs.ts

Kind: added · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T07:01:19.942Z

Overview

This diff represents a new file addition in the NovaDiff project, specifically in the `src/app/novadiffDocs.ts` folder. The file contains several functions that are used to generate documentation for the Novadiff application.

Key changes

The most significant change in this file is the addition of two new functions: `bundleLabel` and `bundleShortDescription`. These functions are used to generate labels and descriptions for the different documentation bundles available in the Novadiff application.

Additionally, there are several imports and exports added to the file, including the import of the `NovadiffDocsBundleKey` type and the export of the `DOC_PREVIEW_PAGES`, `DocPreviewPage`, and `NOVADIFF_DOC_BUNDLES` constants.

Impact

The impact of these changes on the correctness, maintainability, performance, compatibility, or observability of the Novadiff application is unknown at this time. However, it is likely that these changes will improve the functionality and usability of the application by providing more detailed information about the different documentation bundles available.

Risks & follow-ups

There is a risk that these changes may introduce bugs or errors, particularly if the new functions and constants are not properly tested and validated. To mitigate this risk, it would be important to run the JS/TS lint, test, and production build commands used by this repo to ensure that all tests pass and there are no unexpected issues with the code. Additionally, it would be helpful to review the changed lines and imports/exports to ensure that they are correctly implemented and do not introduce any unexpected side effects.

It is also important to note that the impact of these changes may not be fully understood until the changes have been thoroughly tested and validated. Therefore, it is recommended to carefully review the changes and ensure that they are correct and do not introduce any unexpected issues.
