

src/app/novadiffPaths.ts

Kind: added · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T07:01:40.324Z

Overview

This diff represents a change in the `src/app/novadiffPaths.ts` file between the `NovaDiff-main` and `NovaDiff` branches. The file has been modified to add a new function `isNovadiffDocsReservedPath`, which checks if a given path is reserved for NovaDiff documentation purposes. This change is significant because it introduces a new exported function and modifies an existing one.

Key changes

The following are the most important implementation changes introduced by this diff:

- A new function `isNovadiffDocsReservedPath` has been added to check if a given path is reserved for NovaDiff documentation purposes.
- The `NOVADIFF_DOCS_REL` constant has been added to define the reserved path for NovaDiff documentation.
- The `isNovadiffDocsReservedPath` function has been modified to use the `NOVADIFF_DOCS_REL` constant.

Impact

The impact of these changes on correctness, maintainability, performance, compatibility, or observability is not immediately apparent. However, the addition of the `isNovadiffDocsReservedPath` function may introduce some minor performance overhead due to the additional logic required to check if a given path is reserved for NovaDiff documentation.

Risks & follow-ups

There are no immediate risks or regression issues identified in this diff. However, it is important to verify that the new function works correctly and does not introduce any unexpected behavior. Additionally, future changes to the `NOVADIFF_DOCS_REL` constant may require updates to the `isNovadiffDocsReservedPath` function to ensure that it continues to work correctly.
