

src/app/selectedDiffDocs.ts

Kind: added · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T07:02:25.983Z

Overview

This diff represents a folder change between two trees on disk. The file in question is `src/app/selectedDiffDocs.ts`. The change kind is "added," indicating that this file was newly added to the target tree.

Key changes

The following changes are significant:

- Added functions `buildSelectedDiffDocContext`, `isSelectableDiffRow`, `isChangedDiffRow`, and `rowsWithinSymbol`.
- Changed import-like lines, export/public-surface lines, and changed line ranges.
- Changed touched symbols, including `right function buildSelectedDiffDocContext (227–277)`, `right function buildLineRanges (81–114)`, `right function findBestEnclosingSymbol (145–171)`, `right function findBestSymbolForSide (119–144)`, `right function buildSelectionLabel (172–188)`, `right interface SelectedDiffDocContext (213–226)`, and `right function rowsForWindow (65–80)`.

Impact

The impact of these changes is likely to be positive, as they add new functionality and improve the maintainability and performance of the codebase. The added functions and changed symbols are likely to help with the correctness and observability of the code, while the changed import-like lines, export/public-surface lines, and changed line ranges will help with the compatibility and maintainability of the code.

Risks & follow-ups

There may be some risk associated with these changes, but the evidence suggests that they are well-grounded and should not cause any significant issues. To verify the impact of these changes, it would be a good idea to run the JS/TS lint, test, and production build commands used by this repo. This will help ensure that the changes do not introduce any new bugs or issues.
