

src/components/ChangedFilesTree.tsx

Kind: modified · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T06:49:12.261Z

Overview

This diff represents a change in the `src/components/ChangedFilesTree.tsx` file between the `NovaDiff-main` and `NovaDiff` branches. The file is responsible for rendering a tree view of changed files in the Nova app.

Key changes

The most notable changes in this diff are related to the use of the `useDeferredValue` hook and the introduction of a new `deferredRows` variable. These changes aim to improve performance by reducing the number of re-renders caused by the `rows` prop changing.

Impact

The impact of these changes on correctness, maintainability, performance, compatibility, or observability is not immediately apparent from this diff alone. However, the addition of the `deferredRows` variable and the use of the `useDeferredValue` hook suggest that the implementation has been optimized to reduce unnecessary re-renders and improve overall performance.

Risks & follow-ups

There may be some regression risk associated with these changes, as they introduce new dependencies and potentially alter the behavior of the component in some way. To verify the impact of these changes, it would be necessary to run the app's JS/TS lint, test, and production build commands used by this repo. Additionally, it would be useful to perform a thorough review of the code to ensure that the changes do not introduce any unintended side effects or bugs.
