

src/components/LlmSettingsModal.tsx

Kind: modified · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T06:55:25.995Z

Overview

This diff represents a modification to the `src/components/LlmSettingsModal.tsx` file in the NovaDiff repository. The file is part of the app's UI layer and contains a React component that allows users to configure local LLM settings. The changes made to this file are significant because they introduce new functionality and fix bugs.

Key changes

The following changes were made to the file:

- Added a new function called `applyPreset` to allow users to quickly switch between Ollama and LM Studio providers.
- Modified the `onChange` handler for the base URL input field to trim whitespace before setting the value.
- Fixed a bug where the model name input field would not update when the user selected a different provider.
- Added a new `probe` state variable to display the result of a connection test.
- Changed the `onClick` handler for the "Test connection" button to perform a connection test and update the `probe` state variable accordingly.
- Added a new `onClick` handler for the "Save" button to save the updated LLM settings to local storage.

Impact

The changes made to this file have a significant impact on the app's functionality and user experience. The addition of the `applyPreset` function allows users to easily switch between Ollama and LM Studio providers, which can improve their productivity and reduce the likelihood of errors.

The fix for the base URL input field ensures that the user's input is properly trimmed before being saved, which can help prevent issues with whitespace in the URL. The changes to the model name input field ensure that the user's selection is always up-to-date, even if they switch between providers.

The addition of the `probe` state variable allows users to quickly verify the connection to the LLM server, which can help them troubleshoot any issues. Finally, the new `onClick` handlers for the "Test connection" and "Save" buttons provide a more streamlined user experience and reduce the likelihood of errors.

Risks & follow-ups

The changes made to this file have a low risk of regression, as they are focused on improving the app's functionality and user experience. However, there is still a possibility that the changes could introduce new bugs or issues, so it is important to thoroughly test the app after the changes are merged. Additionally, the changes to the `applyPreset` function may require additional testing to ensure that it works correctly in all scenarios.
