

src/components/LlmSummaryMarkdown.tsx

Kind: modified · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T06:55:51.696Z

Overview

This diff represents a change in the `src/components/LlmSummaryMarkdown.tsx` file between the `NovaDiff-main` and `NovaDiff` branches. The file is part of the `js-ts-source` folder and contains the implementation of the `LlmSummaryMarkdown` component.

Key changes

The most significant changes in this diff are related to the implementation of the `MermaidBlock` component and the addition of a new export statement. The `MermaidBlock` component is used to render Mermaid diagrams within the `LlmSummaryMarkdown` component, while the new export statement allows for the memoization of the `LlmSummaryMarkdownInner` function.

Impact

The impact of these changes on the correctness, maintainability, performance, compatibility, or observability of the code is not immediately apparent. However, it is worth noting that the addition of the `MermaidBlock` component may have introduced some additional complexity to the codebase, which could potentially impact its maintainability and performance. Additionally, the use of the `memo` function to memoize the `LlmSummaryMarkdownInner` function may have introduced some overhead in terms of memory usage and computation.

Risks & follow-ups

There are no obvious risks associated with these changes, but it is important to verify that the `MermaidBlock` component is properly integrated into the codebase and that the memoization of the `LlmSummaryMarkdownInner` function does not introduce any unexpected side effects. Additionally, it would be beneficial to run the JS/TS lint, test, and production build commands used by this repo to ensure that the changes do not introduce any new issues or regressions.
