

src/components/SidebarNav.tsx

Kind: modified · Baseline: NovaDiff-main · Target: NovaDiff · Generated: 2026-05-14T06:56:23.523Z

Overview

This diff represents a modification to the `src/components/SidebarNav.tsx` file between the `NovaDiff-main` and `NovaDiff` branches. The file is responsible for rendering the sidebar navigation component in the NovaDiff app.

Key changes

The most significant changes in this diff are related to the addition of new features and improvements to existing ones. Some of the key changes include:

- Addition of a new type called `WorkspacePage`, which is used to represent the different workspace pages available in the app (compare, docs).
- Modification of the `SidebarNav` component to use the new `WorkspacePage` type and add support for displaying the current workspace page.
- Addition of new icons for the different workspace pages.
- Improvements to the layout and styling of the sidebar navigation component.

Impact

The impact of these changes should be positive, as they add new features and improve the user experience of the sidebar navigation component. The ability to display the current workspace page will make it easier for users to navigate between different workspace pages. Additionally, the improved layout and styling of the sidebar navigation component should make it more visually appealing and user-friendly.

Risks & follow-ups

There are no obvious risks associated with these changes, but it is important to verify that the new icons and layout are properly implemented and do not cause any issues with the app's functionality. Additionally, it would be useful to verify that the new `WorkspacePage` type and the ability to display the current workspace page are working correctly and do not cause any unexpected behavior.
