

.novadiff-graph/knowledge-graph.json

Kind: removed · Baseline: 9aadd5eb5604 · Target: NovaDiff · Generated: 2026-05-26T06:54:35.013Z

Overview

The file `.novadiff-graph/knowledge-graph.json` was deleted entirely (lines L1-8000). All graph data—including metadata, node entries for files, functions, classes, and symbol spans—was removed. Consequently, any references to Electron modules, language-lesson logic, extractor implementations, and persistence utilities that were stored in this file are no longer present.

Key changes

- The entire knowledge-graph file was removed.
- All nodes stored in the graph (functions, files, classes, symbol spans) were deleted.
- Electron-specific data, language configuration, extractor logic, and persistence references that resided in the graph were eliminated.

Impact

- Functionality that depends on the knowledge graph (e.g., visualizations, symbol lookup, diff overlays) will be affected.
- Analysis tools that query the graph for summaries, complexity metrics, or change tracking will lose their data source.
- Tests that rely on the graph may fail or be skipped.
- Scripts that generate or consume the graph may error.

Risks & follow-ups

- Users cannot view or interact with the knowledge graph until it is regenerated.
- All historical graph snapshots and metadata are permanently removed.
- Re-generation of the graph is required (e.g., `nova diff --generate-graph`).
- Code that imports or references the removed graph file should be cleaned or guarded.
- After regeneration, re-run relevant tests (e.g., `npm test --packages/graph-core`) to confirm functionality.
