

## electron/knowledge-graph-runner.cjs

Kind: modified · Baseline: 9aadd5eb5604 · Target: NovaDiff · Generated: 2026-05-26T19:20:31.665Z

### Overview

The `electron/knowledge-graph-runner.cjs` file was modified to refine project-file traversal logic.

### Key changes

- `SKIP_DIRS` now contains `"venv"`, `".venv"`, and `".venv-main"` (added at R32-R34).
- In `walkProjectFiles`, the guard was updated to skip any entry whose name starts with `".venv"` in addition to the existing `SKIP_DIRS` check (added at R162-R165).
- The previous isolated guard `if (SKIP_DIRS.has(entry.name))` was removed (L159).
- Exclusion logic for `"site-packages"` remains unchanged.

### Impact

- Virtual-environment directories are no longer traversed, reducing unnecessary file processing during knowledge-graph generation.
- Existing exclusion logic for Python package directories is preserved.

### Risks & follow-ups

- Verify that legitimate directories named `".venv"` are not unintentionally skipped.
- Run the repository's lint, test, and production build commands to confirm no regressions.
