

packages/graph-view/src/NovaDiffGraphExplorerEmbed.tsx

Kind: modified · Baseline: 9aadd5eb5604 · Target: NovaDiff · Generated: 2026-05-26T19:48:00.178Z

Overview

`NovaDiffGraphExplorerEmbed` now accepts three optional props—`detailLevel`, `showFunctionsInClassView`, and `cityFilterNodeIds`. The change is confined to `packages/graph-view/src/NovaDiffGraphExplorerEmbed.tsx` (lines 13, 26-28, 53-55, 129-131). A type-only import for `DetailLevel` is added, keeping the runtime bundle unchanged.

Key changes

- **Import:** `import type { DetailLevel } from "./store";` (R13).
- **Props:**
 - `detailLevel?: DetailLevel;` (R26)
 - `showFunctionsInClassView?: boolean;` (R27)
 - `cityFilterNodeIds?: string[] | null;` (R28).
- **Component signature** updated to include the new props (R53-55).
- **Prop forwarding:** the three props are passed to `GraphEmbedSyncBridge` (R129-131).
- No other logic or rendering changes were made.

Impact

- **Non-breaking:** all new props are optional; existing consumers compile and run unchanged.
- **Type safety:** the `DetailLevel` import is type-only, so there is no runtime cost.
- **Behavior:** the effect of `showFunctionsInClassView` and `cityFilterNodeIds` on node visibility is unknown from the available diff/scan evidence; they are simply forwarded to `GraphEmbedSyncBridge`.
- **Documentation:** API surface expands; docs and examples should list the new options.
- **Testing:** existing unit tests remain valid; new tests should verify the optional props' effects.

Risks & follow-ups

- **Prop handling:** confirm that `GraphEmbedSyncBridge` accepts and applies the new props; otherwise the UI may not reflect the intended settings.
- **Backward compatibility:** ensure legacy code importing `NovaDiffGraphExplorerEmbedProps` does not rely on the absence of these fields; TypeScript will treat them as optional.
- **Performance:** filtering by `cityFilterNodeIds` could introduce lag on large graphs; benchmark if necessary.
- **Documentation:** update README/API docs to describe the new props and their default behaviors.
