

src/app/codeMapLoadProgress.ts

Kind: added · Baseline: 9aadd5eb5604 · Target: NovaDiff · Generated: 2026-05-26T19:28:33.655Z

Overview

`src/app/codeMapLoadProgress.ts` adds a public API for tracking the Code Map loading progress. It declares the types `CodeMapGraphProgress`, `CodeMapLoadState`, and `CodeMapLoadSnapshot`, and exports the helpers `computeCodeMapLoadSnapshot`, `isCodeMapExperienceReady`, and the constant `CODE_MAP_HANDOFF_MS` (line 124).

Key changes

- **Exports*
 - new symbols added at the top of the file (lines 1-6, 8-16, 18-24).
- **Progress calculation*
 - `graphPercent` (lines 30-53) maps graph phases and progress ratios to a 0-100 scale using the constants `GRAPH_END` (52), `CITY_END` (88), and `MOUNT_END` (100).
- **Snapshot logic*
 - `computeCodeMapLoadSnapshot` (lines 54-107) returns a `CodeMapLoadSnapshot` that reflects the current phase ("Knowledge graph", "Code city", "Explorer", or "Ready") and computes `percent`, `spawnCount`, and `spawnTarget`.
- **Readiness check*
 - `isCodeMapExperienceReady` (lines 109-121) evaluates `graphReady`, `explorerMounted`, `cityReady`, and `graphBuilding` to determine if the experience is ready.
- **Timing constant*
 - `CODE_MAP_HANDOFF_MS` (line 124) defines the cross-fade duration from preview to live view.

Impact

- Centralizes progress metrics, reducing duplicated logic across the UI.
- Provides a single source of truth for progress percentages and readiness flags.
- Snapshot data can be logged or sent to analytics for monitoring user experience.
- As a new file, it introduces no breaking changes; existing imports remain unaffected.

Risks & follow-ups

- Verify that `graphPercent` handles edge cases such as `total = 0` or `current > total`.

- Ensure `computeCodeMapLoadSnapshot` aligns with UI expectations for each phase; unit tests should cover all branches.
- Confirm that `isCodeMapExperienceReady` logic matches the intended semantics, especially when `graphBuilding` toggles.
- Update any documentation or type references that now depend on the new `CodeMapLoadState` interface.
