

src/app/workspaceTypes.ts

Kind: modified · Baseline: 9aadd5eb5604 · Target: NovaDiff · Generated: 2026-05-26T19:34:19.919Z

Overview

In `src/app/workspaceTypes.ts` (lines 37-45) the `WorkspaceUiState.workspacePage` union was expanded to include `"insights"`. The change is purely type-level; no runtime code was added.

Key changes

- `WorkspaceUiState` interface updated: `workspacePage?` now allows `"insights"`.
- The union is split across several lines (R38-R45) for readability.
- No other fields in `WorkspaceUiState` or related interfaces were modified.
- The diff shows the removal of the original single-line union (L38) and its replacement with the multi-line union (R38-R45).

Impact

- Code that assigns or checks `workspacePage` must now consider `"insights"`.
- Because `workspacePage?` is optional, existing objects remain valid; no breaking changes.
- Components rendering based on `workspacePage` should add a case for `"insights"` to avoid missing-case warnings.
- TypeScript compilation and linting should succeed unchanged.

Risks & follow-ups

- Review all `switch` or `if` statements on `workspacePage` for exhaustiveness.
- Update unit tests that assert allowed `workspacePage` values to include `"insights"` or ignore it.
- Update any documentation or comments that list possible `workspacePage` values.
- Verify that any serialization/deserialization logic handling `workspacePage` accepts the new value.
