

src/components/DocsGraphExploreChrome.tsx

Kind: modified · Baseline: 9aadd5eb5604 · Target: NovaDiff · Generated: 2026-05-26T07:57:42.733Z

Overview

- `src/components/DocsGraphExploreChrome.tsx` now uses typed arrays for filter props instead of single strings.
- New imports were added at the top of the file:
 - `CodeCityViewportProvider` from `../app/CodeCityViewportContext` (R15).
 - `ALL_CHANGE_STATE_FILTERS`, `ALL_SYMBOL_KIND_GROUPS`, `changeStatesFilterActive`, `symbolKindsFilterActive` from `../app/types` (R18-R27).

Key changes

- **Imports (R15-R27)** – added the imports above.
- **Props interface (R44-R73)** – `CityExploreBarProps` now declares `citySymbolKinds: SymbolKindGroup[]`, `cityChangeStates: CodeCityChangeState[]`, and corresponding setter props.
- **Filter counting (R61-R105)** – `countActiveCityFilters` now uses `symbolKindsFilterActive` and `changeStatesFilterActive` to compute the number of active filters.
