

src/components/GitHistoryWorkspace.tsx

Kind: modified · Baseline: 9aadd5eb5604 · Target: NovaDiff · Generated: 2026-05-26T19:38:13.522Z

Overview

`GitHistoryWorkspace` was refactored to replace the old commit-sorting logic with a branch-centric view. The component now loads branch metadata, aggregates branch commits with indexed commits, and renders commits per selected branch. The legacy “indexing” section and related props were removed.

Key changes

- **Imports** – added `GitBranchSummary`, `commitFromBranchTip`, `enrichBranchCommits`, `pickDefaultBaseBranch`, `pickDefaultHeadBranch`, and `resolveGitRepoRoot` (R3-R10).
- **State** – new hooks for `branches`, `branchesLoading`, `branchLoadError`, `baseBranch`, `headBranch`, `branchCommits`, and `branchCommitsLoading` (lines 58-65).
- **Branch loading** – `loadBranches` (lines 75-109) fetches branches, sets defaults via `pickDefault...`, and handles errors.
- **Commit aggregation** – `reloadBranchCommits` (lines 115-152) merges branch commits with indexed commits using `enrichBranchCommits`; `listCommits` (lines 158-164) replaces the old `sorted` array.
- **UI updates** –
 - `HistoryCompareStrip` now receives `branches`, `branchesLoading`, `branchLoadError`, `baseBranch`, `headBranch`, `useLiveHead`, `liveRepoRoot`, `busy`, `error`, `loading`, `onBaseBranch`, `onHeadBranch`, `onUseLiveHead`, `onBrowseLiveRepo`, `onLiveRepoBlur`, and `onSwap` (lines 260-271).
 - Removed props `indexing`, `onBaseHash`, `onHeadHash`, `onLiveRepoRoot` (lines 149-152).
 - Commit list renders from `listCommits`; focus logic uses `focusHash` (lines 280-292).
 - The “Indexed commits” section and its loading/error UI were removed (lines 162-167).
- **Interaction changes** – `swapBranches` (lines 214-218) swaps `baseBranch` / `headBranch`; `runCompare` (lines 222-240) uses `listCommits` and branch metadata to determine commits to compare.
- **Persisting live repo** – `persistLiveRepo` now triggers `loadBranches` after saving (lines 210-212).

Impact

- **Correctness** – Branch-based commits are now the source of truth; the old `sorted` logic is eliminated.
- **Maintainability** – Centralized branch handling simplifies future extensions.
- **Performance** – Consolidated state reduces re-renders; branch loading is async and cached.
- **Compatibility** – Consumers that passed the removed props (`indexing`, `onBaseHash`, etc.) must be updated.

Risks & follow-ups

- **Comparison logic** – Verify that `runCompare` selects the intended commits when `useLiveHead` is true (logic changed in lines 222-240).
- **Commit count display** – Confirm that `listCommits.length` matches expectations after branch changes (lines 292-295).
- **Branch default selection** – Test that `pickDefaultBaseBranch` / `pickDefaultHeadBranch` correctly choose defaults when the repo has no current branch (lines 95-102).
- **Legacy consumers** – Search for components still passing the removed props and update them.
