

src/components/SidebarNav.tsx

Kind: modified · Baseline: 9aadd5eb5604 · Target: NovaDiff · Generated: 2026-05-26T19:40:58.501Z

Overview

`src/components/SidebarNav.tsx` was refactored to replace the legacy *compact* mode with a new `expand` prop that drives panel state.

- The file now imports `useEffect`, `useRef`, `UseSidebarExpandResult`, and `usePrefersReducedMotion` (lines R1-R17).
- A new `SidebarTypedLabel` component (lines 58-119) replaces inline typewriter logic and respects reduced-motion settings.
- `SidebarExpandProps` is exported as a `Pick` of `UseSidebarExpandResult` fields (lines R7-R16).
- `SidebarNavProps` no longer accepts `compact`; it now requires `expand: SidebarExpandProps` (lines 40-57).
- `NavLink` props were updated: `compact` removed, `collapsed`, `showSlot`, `typingActive`, `erasingActive`, and `labelDelay` added (lines 120-139).
- Icon handling was unified: `iconProps` removed; `navIcon` (size 18) and `featureIcon` (size 16) constants introduced (lines 54-56).
- All compact-specific class names and markup blocks were removed (e.g., `sidebar--compact`, `sidebar-brand--compact`, `sidebar-feature--compact`, etc., lines 40-41, 55-56, 58-59).
- Launch-brand logic now uses `useLaunch`'s `skipSequence` and `panelExpanded` from `expand`, with a `useRef / useEffect` timeout of 4 s (lines 186-210).

Key changes

- **Imports & exports:** added `useEffect`, `useRef`, `UseSidebarExpandResult`, `usePrefersReducedMotion`; exported `SidebarExpandProps`.
- **Props:** `SidebarNavProps` now requires `expand`; `NavLink` uses `collapsed`, `showSlot`, `typingActive`, `erasingActive`, `labelDelay`.
- **State handling:** panel state derived from `expand`; launch-brand animation controlled via `useRef / useEffect`.
- **Icon logic:** replaced `iconProps` with `navIcon / featureIcon`.
- **UI:** all compact-specific markup replaced with `collapsed / showSlot` and `SidebarTypedLabel`.
- **Accessibility:** `SidebarTypedLabel` falls back to plain text when `usePrefersReducedMotion` is true.

Impact

- Callers must supply the new `expand` prop; otherwise the component will error.
- Removed duplicated compact logic reduces future maintenance.

- `SidebarTypedLabel` may instantiate many `TypewriterText` components; keep the number of labels reasonable.
- The 4 s launch-brand timeout is now managed by a ref; verify its behavior.

Risks & follow-ups

1. **Missing `expand` prop** – ensure all usages of `SidebarNav` pass it.
2. **Icon rendering** – confirm `navIcon` / `featureIcon` sizes match design expectations.
3. **Reduced motion fallback** – test with OS reduced-motion settings to verify static text rendering.
4. **Brand animation** – validate the 4 s timeout and `launchBrandPendingRef` logic still shows the brand correctly after launch.
