

tests/codeMapLoadProgress.test.ts

Kind: added · Baseline: 9aadd5eb5604 · Target: NovaDiff · Generated: 2026-05-26T19:15:44.513Z

Overview

A new test file `tests/codeMapLoadProgress.test.ts` (lines 1-40) has been added. It imports `vitest` helpers and the two functions `computeCodeMapLoadSnapshot` and `isCodeMapExperienceReady` from `../src/app/codeMapLoadProgress`.

Key changes

- **Imports:** `import { describe, expect, it } from "vitest";` and the two functions (R1-R5).
- **Snapshot test:** Calls `computeCodeMapLoadSnapshot` with a graph-building state and asserts that `snap.phase` equals `"Knowledge graph"` and `snap.percent` is less than 55 (R8-R19).
- **Readiness test:** Calls `isCodeMapExperienceReady` with different flag combinations and expects `true` only when `graphReady`, `explorerMounted`, and `cityReady` are all true (R22-R39).

Impact

- Provides unit checks for the state-transition logic in `codeMapLoadProgress`.
- Future changes to the snapshot or readiness logic will be caught by these tests.

Risks & follow-ups

- No production code changes; risk is limited to test failures if logic changes.
- Run the full test suite to confirm no regressions; update snapshots or logic if needed.
