

tests/docsExploreFilters.test.ts

Kind: added · Baseline: 9aadd5eb5604 · Target: NovaDiff · Generated: 2026-05-26T19:16:38.011Z

Overview

A new test file `tests/docsExploreFilters.test.ts` was added to validate the three exported utilities from `../src/app/docsExploreFilters`. The file imports `vitest` helpers (`describe`, `expect`, `it`) and the functions `graphDetailFromSymbolKinds`, `symbolMatchesKindGroups`, and `toggleSymbolKindGroup`.

Key changes

- **Imports added** (lines 1-6 of the test file):

```
``ts import { describe, expect, it } from "vitest";
import { graphDetailFromSymbolKinds, symbolMatchesKindGroups, toggleSymbolKindGroup,
} from "../src/app/docsExploreFilters";
```

- Verify `graphDetailFromSymbolKinds` maps symbol kinds to the correct graph detail level and `showFunctionsInClassView` flag (lines 10-25).
- Confirm `symbolMatchesKindGroups` matches a symbol kind against a list of structure groups (lines 29-32).
- Ensure `toggleSymbolKindGroup` keeps at least one group enabled when toggling (lines 36-40).

Impact

- ****Correctness****: Explicit assertions guard against silent regressions in the filtering logic.
- ****Coverage****: Adds dedicated tests for the docs-explore filtering utilities, which previously had no tests.
- ****Maintainability****: The tests serve as documentation for expected behavior, aiding future refactors.
- ****Build/CI****: No changes to build scripts; the new file will be executed by the existing test runner.

Risks & follow-ups

- ****Implementation drift****: If the signatures or return shapes of the three functions change, the tests will fail. Verify that the implementation matches the expected contract.
- ****Path changes****: The import path `../src/app/docsExploreFilters` must remain valid; moving the module will require updating the test import.
- ****Test flakiness****: The tests are deterministic, but ensure that any global state or environment configuration does not affect the outcomes.
- ****CI performance****: Adding a few tests has negligible impact; run the full test suite to confirm no regressions.
