

tests/gitHistoryBranches.test.ts

Kind: added · Baseline: 9aadd5eb5604 · Target: NovaDiff · Generated: 2026-05-26T19:16:55.335Z

Overview

A new test file `tests/gitHistoryBranches.test.ts` (lines R1-69) has been added to validate the `gitHistoryBranches` module. The file imports `describe`, `expect`, `it` from `vitest` (R1) and the four exported helpers from `../src/app/gitHistoryBranches` (R2-6). It also imports the `GitBranchSummary` type from `../src/app/gitTypes` (R8).

Key changes

- **Imports:**
 - `import { describe, expect, it } from "vitest";` (R1)
 - `import { commitFromBranchTip, pickDefaultBaseBranch, pickDefaultHeadBranch, enrichBranchCommits } from "../src/app/gitHistoryBranches";` (R2-6)
 - `import type { GitBranchSummary } from "../src/app/gitTypes";` (R8)
- **Mock data:** An array of three `GitBranchSummary` objects (`main`, `feature/x`, `origin/main`) is defined to exercise different scenarios (lines 10-34).
- **Test cases:**
 - `pickDefaultBaseBranch` should return `"main"` when present (lines 38-40).
 - `pickDefaultHeadBranch` should prefer the current branch (`"feature/x"`) (lines 42-44).
 - `commitFromBranchTip` should produce a commit whose `hash` matches the branch tip and whose `subject` contains the branch name (lines 46-50).
 - `enrichBranchCommits` should attach snapshot paths from a provided snapshot list to matching commits (lines 52-68).

Impact

- The tests provide executable documentation of the intended API contract.
- Any future change that alters these behaviors will be caught immediately.
- The added tests increase coverage; the effect on CI runtime is unknown from the available diff/scan evidence.

Risks & follow-ups

- If the current implementation of `gitHistoryBranches` does not satisfy these expectations, the tests will fail; review the module accordingly.
- Verify that `GitBranchSummary` matches the shape used in the tests to avoid type errors.
- The enrichment test assumes a snapshot with `snapshotPath: "/snap"`; ensure the logic matches commits by hash.
- Run `vitest` locally and in CI to confirm the new tests execute without flakiness.
