

packages/graph-view/src/NovaDiffGraphExplorerEmbed.tsx

Kind: modified · Baseline: f7c2bfd81af2 · Target: NovaDiff · Generated: 2026-05-21T11:12:29.390Z

Overview

`NovaDiffGraphExplorerEmbed` now imports and renders `GraphEmbedSyncBridge` to expose embed-specific controls. The component's props interface has been extended with optional fields for node selection, file path, focus mode, and a selection-change callback.

Key changes

- **Import added:** `GraphEmbedSyncBridge` from `./GraphEmbedSyncBridge` (line 12).
- **Props extended:** `controlledNodeId`, `enteredFilePath`, `focusMode`, `onSelectionChange` (lines 22-25).
- **Signature updated** to accept the new props (lines 46-49).
- **Bridge rendered** inside the provider, passing the new props (lines 118-123).

Impact

- **Backward compatibility:** All new props are optional; existing consumers compile unchanged.
- **Build requirement:** `GraphEmbedSyncBridge` must be exported from its module; otherwise the import fails.
- **Testing:** Existing tests that render the embed without the new props should still pass; new tests should verify bridge interaction.

Risks & follow-ups

- **Missing export:** Verify `GraphEmbedSyncBridge` is correctly exported.
- **Prop misuse:** Clarify whether `controlledNodeId` and `enteredFilePath` are mutually exclusive or how they are handled by the bridge.
- **Bridge side-effects:** Ensure the bridge does not unintentionally alter global state or interfere with other components.
- **Lint & build:** Run `npm run lint`, `npm test`, and `npm run build` to catch any type or runtime errors introduced by the new imports and props.
