

packages/graph-view/src/index.css

Kind: modified · Baseline: f7c2bfd81af2 · Target: NovaDiff · Generated: 2026-05-21T11:12:49.973Z

Overview

The `packages/graph-view/src/index.css` file was updated to modify the layout of React-Flow controls when the CodeCity minimap is present. The changes add a grid-based layout for the control panel, reposition the minimap and its button, and introduce light-theme overrides. No JavaScript was touched.

Key changes

- **Grid layout for controls** – Lines 301-340 add ``css .novadiff-graph-embed .react-flow__controls.code-city-graph-dock-host { ... }

```
- Minimap & button positioning – Lines 315-329 set ``css
.react-flow__panel.bottom.left.react-flow__controls:has([data-code-city-minimap]) { ... }
`` with `grid-column: 1 / -1` for the minimap and `grid-row: 2` for the button.
- Control button styling – Lines 341-349 update ``css
.novadiff-graph-embed .react-flow__controls-button { ... }
`` to match the new layout.
- Minimap appearance – Lines 351-355 keep the border radius and subtle border.
- Light-theme overrides – Lines 357-364 adjust `.diff-faded`, scrollbar track, and `.warning-
banner` for better contrast on light backgrounds.
```

Impact

```
- UI – The minimap docks beside the zoom controls instead of overlaying them, improving
usability in the NovaDiff embed.
- Scope – All new selectors are prefixed with `.novadiff-graph-embed`, limiting side effects.
- Performance – Pure CSS changes; no runtime cost.
- Compatibility – Existing React-Flow components render normally; only the control layout
changes.
```

Risks & follow-ups

```
- Layout regression – Verify the grid layout on very small viewports or when the minimap is
hidden.
- Specificity conflicts – Ensure the new rules override any global React-Flow styles; a visual
check is recommended.
- Light-theme consistency – Test the overrides on both dark and light themes to confirm
contrast and readability.
- Documentation – Update any style guides that reference the old control layout.
```
