

src/app/DocsViewSyncContext.tsx

Kind: added · Baseline: f7c2bfd81af2 · Target: NovaDiff · Generated: 2026-05-21T10:52:05.049Z

Overview

`src/app/DocsViewSyncContext.tsx` adds a React context that synchronizes documentation view state with the CodeCity graph. It exports an interface, a provider component, and three hooks for consuming the context.

Key changes

- **Imports** (R1-R10): React hooks and `CodeCityRenderableBuilding` .
- **`DocsViewSyncState` interface** (R12-R25): flags for linking and focus, selected node/building, and mutation callbacks.
- **Context creation** (R27): `createContext<DocsViewSyncState | null>(null)` .
- **`DocsViewSyncProvider`** (R29-R124): initializes state with `useState` , exposes setters, and memoizes the value (R92-R118).
- **`useDocsViewSync`** (R126-R131): throws if the provider is missing (R128-R130).
- **`useDocsViewSyncOptional`** (R134-R136): returns the context or `null` .
- **`useDocsViewSyncExternalNode`** (R138-R149): when `enabled` and `linkViews` are true, calls `sync.setSelectionFromGraph(nodeId)` inside a `useEffect` (R143-R148).

No existing files are modified; the module is entirely new.

Impact

- **Correctness:** state mutations are confined to the provider; consumers must be wrapped.
- **Maintainability:** all sync logic resides in one place, easing future updates.
- **Performance:** `useMemo` and `useCallback` keep the context value stable, reducing unnecessary re-renders.
- **Compatibility:** components that previously relied on implicit sync must now import and use the new hooks.

Risks & follow-ups

- **Provider omission:** `useDocsViewSync` throws if used outside the provider (R128-R130). Verify all consumers are wrapped.
- **Null context:** `useDocsViewSyncOptional` may return `null` (R134-R136); callers must handle this case.
- **Effect dependencies:** `useDocsViewSyncExternalNode` depends on `sync` (R143-R148); ensure the context reference does not change unexpectedly.
- **Lint & build:** run `npm run lint` , `npm test` , and `npm run build` to confirm no TypeScript or ESLint errors.
