

src/app/commitMessage.ts

Kind: modified · Baseline: f7c2bfd81af2 · Target: NovaDiff · Generated: 2026-05-21T10:53:59.902Z

Overview

`src/app/commitMessage.ts` now accepts an options object, adds classification helpers, and includes a district-level breakdown in the LLM prompt. Two utilities from `./commitChangeAnalysis` are re-exported for external use.

Key changes

- **Imports** (R3-8): added `classifyCompareRows`, `districtBreakdown`, `graphSymbolsContext`, and `UpdateDecision`.
- **New interface** (R12-17): `CommitMessageContextOptions` with optional `classification`, `graphContext`, and `githubContext`.
- **Function signature** (R26): `buildCommitMessageContext` now takes `options: CommitMessageContextOptions = {}`.
- **Classification logic** (R28-29): uses `options.classification ?? classifyCompareRows(docRows)` to set `classification`.
- **District breakdown** (L21 / R36-40): inserts a "By district" section listing up to 24 top-level folders.
- **Context injection** (R42-51): appends optional `graphContext` and trimmed `githubContext` when provided.
- **Export** (R67-68): re-exports `graphSymbolsContext` and `classifyCompareRows`.
- **No change** to `parseCommitMessageOutput` (lines 69-96 remain unchanged).

Impact

- **Backward compatibility**: default options preserve existing behavior; callers may supply richer context without breaking.
- **API surface**: `buildCommitMessageContext` now exposes an options parameter and the file re-exports expose helper utilities.
- **Prompt content**: added sections (classification, district breakdown, optional contexts) may increase prompt length but provide more detail for LLMs.

Risks & follow-ups

- Verify that `classifyCompareRows` and `districtBreakdown` handle empty `docRows` without throwing.
- Ensure the `githubContext` trimming (`slice(0, 2000)`) does not truncate essential URLs.
- Run the existing test suite to confirm that added sections do not affect downstream parsing logic.

- Monitor LLM output quality after the new context is introduced; the added "By district" section may influence prompt length limits.
