

src/app/workspaceStorage.ts

Kind: modified · Baseline: f7c2bfd81af2 · Target: NovaDiff · Generated: 2026-05-21T10:57:08.342Z

Overview

`src/app/workspaceStorage.ts` now tracks product-tour completion.
A new key `PRODUCT_TOUR_KEY` and two helper functions were added.

Key changes

- **Line 6:** `const PRODUCT_TOUR_KEY = "novadiff_product_tour_v1"` (R6).
- **Lines 8-12:** `export function loadProductTourCompleted(): boolean` (R8-R12).
- Reads `localStorage.getItem(PRODUCT_TOUR_KEY)` inside a `try/catch`.
- Returns `true` only when the stored value is `"1"`.
- **Lines 16-22:** `export function saveProductTourCompleted(): void` (R16-R22).
- Writes `"1"` to `localStorage` inside a `try/catch`.
- Errors are silently ignored.

Impact

- Adds a dedicated API for persisting the tour-completion flag.
- Centralizes the key and storage logic; future changes can be made in one place.
- No existing exports are removed, so the change is additive.

Risks & follow-ups

- **Environment safety:** The `try/catch` guards are intended to prevent crashes when `localStorage` is unavailable (e.g., SSR or Node). Verify that this guard behaves as expected in all target environments.
- **Test coverage:** Add unit tests for `loadProductTourCompleted` and `saveProductTourCompleted` to confirm correct behavior when storage is present, missing, or throws.
- **Key collision:** Ensure `PRODUCT_TOUR_KEY` does not clash with other keys in the application.
- **Regression:** Confirm that existing code paths that interact with `localStorage` continue to work after these additions.
