

src/app/workspaceTypes.ts

Kind: modified · Baseline: f7c2bfd81af2 · Target: NovaDiff · Generated: 2026-05-21T10:57:25.816Z

Overview

The `WorkspaceUiState` interface in `src/app/workspaceTypes.ts` now includes a new `workspacePage` option: `"docReports"`. This change is confined to line 38 of the file.

Key changes

- `WorkspaceUiState.workspacePage` union expanded from ``ts "compare" | "history" | "docs" | "prs" | "publish"

to ts "compare" | "history" | "docs" | "docReports" | "prs" | "publish"

– No other properties or interfaces were modified.

Impact

- Type safety: code that assigns or checks ``workspacePage`` must now consider ``"docReports"``.
- UI routing: components that render based on ``workspacePage`` may need an additional case.
- Tests: assertions enumerating allowed values may need updating.
- Runtime behavior remains unchanged.

Risks & follow-ups

- Unhandled page value: components switching on ``workspacePage`` without a default or missing ``"docReports"`` could render incorrectly.
- Test failures: existing unit tests that validate the union type may fail.
- Documentation: any docs listing valid ``workspacePage`` options should be updated.
- Linting: custom rules or type guards enforcing the allowed set must include the new value.
