

src/components/DocumentationWorkspaceLinked.tsx

Kind: added · Baseline: f7c2bfd81af2 · Target: NovaDiff · Generated: 2026-05-21T11:03:08.220Z

Overview

A new `src/components/DocumentationWorkspaceLinked.tsx` file introduces a set of utilities that bind the documentation workspace to the Code City graph. It adds a sync root component, a bootstrap helper, a custom hook `useLinkedCityState`, and two toolbar components.

Key changes

- **InitialDocsFocus interface** (lines 16-22) defines optional props for initial focus state.
- **DocumentationWorkspaceSyncRoot** (lines 24-37) wraps children in `DocsViewSyncProvider` and injects `DocsFocusBootstrap`.
- **DocsFocusBootstrap** (lines 39-42) registers an external node with `useDocsViewSyncExternalNode`.
- **useLinkedCityState** (lines 44-174) computes filtered layout, building mappings, highlights, and exposes callbacks for graph/city selection and entry/exit.
- **CodeCityGraphToolbar** (lines 176-206) renders a toolbar that shows the current file context and an exit button.
- **DocsLinkToolbar** (lines 208-215) displays a hint that the city and graph stay linked.

Impact

- **Correctness:** The hook centralizes sync logic; any misuse of `sync` or missing context will surface at runtime.
- **Maintainability:** New exports are self-contained; future refactors can target this file without touching other modules.
- **Performance:** Heavy `useMemo` chains (e.g., `filteredLayout`, `buildingByNode`) may add overhead; monitor rendering times when the graph payload is large.
- **Compatibility:** As a new file, it does not break existing code but requires importing the new components where needed.

Risks & follow-ups

- **Context availability:** Verify that `DocsViewSyncProvider` is rendered above any consumer of `useLinkedCityState`.
- **Type safety:** Ensure `GraphPayload` and `CodeCityLayoutResult` types align with actual payloads; mismatches will cause runtime errors.
- **Performance regression:** Benchmark `useLinkedCityState` with a large graph to confirm memoization thresholds are adequate.
- **UI consistency:** Confirm that `CodeCityGraphToolbar` and `DocsLinkToolbar` integrate visually with existing toolbars and do not duplicate functionality.
