

src/components/SidebarNav.tsx

Kind: modified · Baseline: f7c2bfd81af2 · Target: NovaDiff · Generated: 2026-05-21T11:08:07.935Z

Overview

`src/components/SidebarNav.tsx` was refactored to add a compact UI mode, a new `NavLink` helper component, and an expanded `WorkspacePage` enum. The brand-reveal animation logic was removed, and the feature list and navigation links were reorganized.

Key changes

- Added `import type { ReactNode } from "react";` (line 1).
- Removed `BookOpen` icon import (line 5).
- Expanded `WorkspacePage` enum to include `"docReports"` (lines 18-24).
- Added `compact?: boolean` to `SidebarNavProps` (line 33).
- Added `icCompact` constant for compact icon sizing (line 41).
- Created `NavLink` helper component (lines 43-77) replacing inline button markup.
- Updated `<aside>` and `<nav>` to be compact-aware (lines 86-140).
- Updated `showLaunchBrand` to `brandReveal && !skipSequence && !compact` (lines 94-95).
- Rewrote feature list and navigation links to use `NavLink` and new icon props (lines 142-260).
- Conditionally rendered compact avatar and text in user section (lines 287-312).
- Updated `onOpenSettings` button to disable when absent (lines 276-280).

Impact

- `NavLink` centralizes link styling, reducing duplication.
- Compact mode changes layout; tests should cover both modes.
- Expanded `WorkspacePage` requires callers to handle `"docReports"`.
- Removing the brand-reveal animation may slightly improve initial render time.
- No other modules reference `BookOpen`, so its removal is safe.

Risks & follow-ups

- Verify all `NavLink` instances forward props correctly and that the `"docReports"` route is wired.
- Run visual regression tests for `compact` true/false.
- Ensure any tests or analytics tied to the removed brand-reveal animation are updated.
- Confirm avatar fallback and compact text render correctly when `compact` is true.
