

.novadiff-graph/diff-overlay.json

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:16:01.179Z

Overview

A new file, `.novadiff-graph/diff-overlay.json`, was added to the repository (change kind: added, lines 1-156). It contains metadata for the current diff run.

Key changes

- **File addition:** `.novadiff-graph/diff-overlay.json` now exists.
- **Metadata fields:**
 - `"version": "1.0.0"` (R2)
 - `"baseBranch": "novadiff-compare"` (R3)
 - `"generatedAt": "2026-05-20T01:19:05.929Z"` (R4)
- **Changed files list** (`"changedFiles"` array, R5-6): includes entries such as
 - `electron/main.cjs`
 - `packages/graph-view/src/App.tsx`
 - `src/App.tsx`(the array lists all files touched in this diff).
- **Changed node IDs** (`"changedNodeIds"` array, R36-154): a comprehensive list of file- and function-level identifiers that were affected.
- **Affected node IDs** (`"affectedNodeIds"` array, R155-156): empty, indicating no nodes were explicitly marked beyond the changed ones.

Impact

- **Data source:** Consumers can read this JSON to determine which files and nodes changed.
- **Versioning:** The `"version"` field allows future consumers to adapt to schema changes.
- **Timestamping:** `"generatedAt"` provides a deterministic point for caching or debugging.
- **Backward compatibility:** Existing code that ignores this file remains unaffected; new consumers must handle its absence gracefully.

Risks & follow-ups

- **Consumer compatibility:** Verify that modules expecting a pre-existing overlay file handle the new file correctly.
- **Performance:** Loading a large `"changedNodeIds"` array could impact startup; benchmark if necessary.
- **Test coverage:** Run targeted tests that read `diff-overlay.json` and confirm the node lists match expectations.
- **Documentation:** Update any README or API docs that reference diff metadata to include the new file and its schema.
