

`.novadiff-graph/meta.json`

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:17:36.797Z

Overview

A new file, `.novadiff-graph/meta.json`, has been added to the repository. It contains a flat JSON object with metadata about the current diff-graph snapshot.

Key changes

- **File addition:** `.novadiff-graph/meta.json` (lines 1-6).
- **Metadata fields:**
 - `lastAnalyzedAt` : 2026-05-20T01:19:05.928Z (line 2).
 - `gitCommitHash` : 6c333f6cf037bf75318c26081cae3324fdb89c64 (line 3).
 - `version` : 1.0.0 (line 4).
 - `analyzedFiles` : 329 (line 5).

Impact

- **Observability:** The timestamp and commit hash allow tools to report when the graph was last updated and which commit it represents.
- **Versioning:** The `version` field provides a simple schema version that can be checked by consumers.
- **Data integrity:** The commit hash ties the metadata to a specific repository state, aiding reproducibility.

Risks & follow-ups

- **Missing file handling:** Verify that consumers of the graph handle the absence of `meta.json` gracefully.
- **Timestamp format:** Ensure downstream consumers parse the ISO-8601 timestamp correctly.
- **Commit hash consistency:** Confirm that the hash matches the current HEAD of the repository.
- **File size:** The file is tiny, but check that adding it does not trigger any size limits in CI or packaging scripts.
