

README.md

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:07:05.492Z

Overview

A new `README.md` file (lines R1-R72) has been added to the repository. It introduces NovaDiff, lists its features, roadmap, quick-start instructions, and technical stack.

Key changes

- **File addition:** `README.md` now exists in the root.
- **Header & branding:** `# NovaDiff` (R1) and tagline **AI-Powered Code Folder Comparison & Intelligent Review** (R3).
- **Hero image:** `![NovaDiff Hero]`
(<https://github.com/anomaloushuman/NovaDiff/blob/cf1a138540b0b7e4a203ade2f87423cf7ecb37d7/nova-diff-desktop.jpg>) (R9).
- **Feature list** (R13-R22):
 - Lightning-fast folder comparison
 - Beautiful syntax-highlighted side-by-side diffs
 - AI-Powered Insights and smart summaries
 - Semantic diffing (moved code, renamed variables)
 - Smart change categorization & prioritization
 - AI Review Comments and merge assistance
 - Ignore patterns, `.gitignore` support, custom rules
 - Modern dark-first UI
 - Documentation workspace with per-file AI summaries and code knowledge graph
 - Git & GitHub integration (auth detection, PR compare, auto-commit)
- **Roadmap** (R25-R32): completed core engine, LLM support, Git integration; pending 3-way merge view, VS Code extension, self-hosted web.
- **Quick start** (R34-R51): prerequisites (Node.js, Rust, Git, optional GitHub CLI) and commands for cloning, dev, and release builds.
- **Tech stack** (R53-R60): Electron
 - React
 - TypeScript UI, Rust CLI engine, local review via Ollama/LM Studio, AI layer options, Tree-sitter parsing.
- **License & contributions** (R64-R68): MIT license notice and link to `CONTRIBUTIONS.md`.

Impact

- Adds onboarding documentation for new users and contributors.
- Includes the README in CI artifacts; scripts referencing an old README may need updating.
- Contains keywords that improve repository discoverability (e.g., "semantic diffing", "AI-Powered Insights").

Risks & follow-ups

- **Broken links:** Verify URLs for the hero image, Node.js, Rust, and GitHub CLI.

- **License compliance:** Ensure the MIT license text matches repository policy.
- **CI documentation:** Confirm that CI pipelines include the new README in generated docs.
