

cli/Cargo.toml

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:15:00.147Z

Overview

A new crate `cli` is added with its Cargo.toml at `cli/Cargo.toml`. It defines a binary named `novadiff-cli` that points to `src/main.rs`.

Key changes

- `[package]` section added (lines 1-5): name, version, edition, description.
- Binary target declared via `[[bin]]` (lines 7-9) pointing to `src/main.rs`.
- Dependencies listed (lines 11-19): `regex`, `ignore`, `rayon`, `serde`, `serde_json`, `sha2`, `similar`, `walkdir`.

Impact

- Builds a new executable `novadiff-cli`; the workspace must now include the `cli` crate.
- Provides a command-line interface for folder comparison, as described in the package description.
- Adds runtime dependencies that the binary will link against.

Risks & follow-ups

- Ensure the Cargo workspace includes `cli` so `cargo build` compiles the binary.
- Run `cargo test` to confirm that the new dependencies do not break existing tests.
- Verify that `src/main.rs` compiles against the added crates.
- Monitor binary size and startup performance compared to previous releases.
