

electron/file-summary-export.cjs

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:20:37.036Z

Overview

`electron/file-summary-export.cjs` is a new Electron module that writes and reads Markdown, HTML, and PDF summaries for file-level and selection-level diffs. It is added to the NovaDiff Electron side and exports four main functions plus `isReservedNovadiffRel`.

Key changes

- **Imports & setup*
 - `fs/promises`, `path`, `crypto`, `marked`, `htmlToPdfFile`, and `normalizeMarkdownDocument` are required (lines 3-8). `marked.setOptions` is configured for GFM (line 10).
- **Path handling*
 - `safeSummarySegments` (lines 55-81) validates relative paths. `resolveSummaryDirAbs` (lines 90-103), `resolveSelectionBaseDirAbs` (lines 114-127), and `resolveSelectionDirAbs` (lines 130-138) resolve directories, falling back to a SHA-256 hash when paths are too long or invalid. `MAX_ABS` is set to 220 on Windows, 400 otherwise (line 84).
- **Document builders*
 - `buildFileSummaryDocument` (lines 159-216) and `buildSelectionSummaryDocument` (lines 217-282) convert Markdown to HTML, inject Mermaid fences, and embed a script that signals PDF readiness.
- **Export functions*
 - `exportFileSummaryArtifacts` (lines 294-356) and `exportSelectionSummaryArtifacts` (lines 422-490) write `summary.md`, `summary.html`, `summary.pdf`, and `meta.json`. PDF generation uses `htmlToPdfFile` (lines 344-345, 478-479) with `landscape: false`; any error is returned as `pdfWarning`.
- **Read functions*
 - `readFileSummaryMarkdowns` (lines 365-416) loads persisted file summaries, returning `badges` from `meta.summaryEvidence`.
`readSelectionSummaryMarkdowns` (lines 498-572) loads all selection artifacts under a given `relPath`, returning `label`, `selectionKey`, `requestedMode`, `effectiveMode`, `lineRanges`, `symbol`, `generatedAt`, `markdown`, and `htmlRelPath`. Results are sorted by `relPath` and `generatedAt`.
- **Exports*

- – The module exports `exportFileSummaryArtifacts` , `readFileSummaryMarkdowns` , `exportSelectionSummaryArtifacts` , `readSelectionSummaryMarkdowns` , and `isReservedNovadiffRel` (lines 574-580).

Impact

- **Correctness*
 - – Path validation prevents accidental overwrites of reserved or malformed paths.
- **Maintainability*
 - – Centralized path resolution and document building reduce duplication.
- **Observability*
 - – `meta.json` and `summary.md` provide audit trails; PDF errors surface via `pdfWarning` .
- **Performance*
 - –
