

index.html

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:08:09.149Z

Overview

A new `index.html` file was added to the repository (lines 1-19). It contains the basic HTML skeleton for the NovaDiff web app, including meta tags, font preconnects, and a root element for React.

Key changes

- File creation: `index.html` (added lines 1-19).
- HTML skeleton: `<!doctype html>` to `</html>`.
- Meta tags: `<meta charset="UTF-8" />`, `<meta name="viewport" content="width=device-width, initial-scale=1.0" />`.
- Font preconnects: `<link rel="preconnect" href="https://fonts.googleapis.com">`, `<link rel="preconnect" href="https://fonts.gstatic.com" crossorigin>`.
- Stylesheet link for Inter and JetBrains Mono.
- Root element: `<div id="root"></div>`.
- Script module: `<script type="module" src="/src/main.tsx"></script>`.

Impact

- Provides the HTML scaffold required for the app to launch.
- Centralizes font and meta configuration in one place.
- Preconnect hints are present, which may improve font load times.
- Title tag (`NovaDiff`) and viewport meta aid responsive testing.

Risks & follow-ups

- Verify that `/src/main.tsx` resolves correctly in the production build.
- Ensure no other `index.html` shadows this entry point.
- Run a smoke test to confirm Google Fonts load without errors.
- Confirm the new file is included in the final bundle.
